Sol Park

(425) 326-2651 | solpark0624@gmail.com | https://sol-park.vercel.app/

Education

Princeton University Sep 2024 – May 2028

B.S.E., Computer Science; Minors: Philosophy, Quantitative and Computational Biology Princeton, NJ

Relevant Coursework: [Graduate] Machine Learning for the Natural Sciences, [Graduate] Computational Complexity, Distributed Systems, Computer Architecture, Data Structures and Algorithms, Real Analysis, [Graduate] Statistical Genomics

Technical Skills

Programming Languages: Python, Java, TypeScript, JavaScript, C++, C, SQL, HTML/CSS, Solidity, R, C#

Tools / Frameworks / Libraries: Google Cloud Platform, React Native, Git, OpenRouter, PostgreSQL, PyTorch

Awards: AIME Qualifier, USACO Silver Division, DI Global Finals 1st Place (4 medals)

Languages: English (native/fluent), Korean (native/fluent)

Experience

Technical Staff (Part-Time) Aug 2026 – Present

Ondo Consulting Group (Stealth) Remote

- Conducting full-stack development utilizing Git, Google Cloud Platform (vector db + embedding models), and OpenRouter to create a secure, AI-based product.

ML Platform Engineering Intern Jul 2026 – Aug 2026

Remitly Seattle, WA

- Created a Causal Inference Model using a BG/NBD "Buy-Till-You-Die" model and defined churn as a continuous value, using the BG/NBD p(alive) score, to determine reasons for customer churn (reasons why customers stop using the Remitly app).
- Used SQL to create a specific customer sample table, filtering by number of transactions and gathering within a specific window (2021–2024) for proper inference purposes.
- Programmed Python in Jupyter notebooks for causal inference model, gathering proper confounders and output definitions, testing it on individual treatments, T.

Software Engineering Intern May 2025 – Aug 2025

Nirvana Carbon Solutions (NCS) West Bengal, India (Remote)

- Built a Python optimization tool using data from Google Earth in order to fit the maximum number of fixed-radius irrigation zones over specifc farmland for farmers in West Bengal, India, in order to minimize water transport distance.
- Led a 5-engineer team to process 1,000+ hectares of coastal imagery for mangrove restoration, using R to convert geospatial files to shapefiles and locate deforested plots to the parishad (county) level for restoration prioritization.

Projects

The Initiative for CryptoCurrencies & Contracts Jun 2026

Project: https://safeconstruct-test.vercel.app/ Princeton, NJ

- Created a secure and accurate credential-storage system for construction workers for a hackathon, deploying Solidity to Base Sepolia to use a Ethereum testnet faucet for free transactions in the blockchain.
- Developed a fullstack TypeScript app on Next.js, enforcing secure credential verification, as well as a three-company-style format, including an accreditor, construction school, and construction company.
- Implemented role-based access control (admin, issuer, worker) across the app and smart contract layer, with a per-organization role structure such that an issuer at a construction school could also be a worker at a construction company.

Leadership

Investor Relations Principal | Senior Investments Analyst Sep 2024 – Present

Princeton Student Ventures (PSV) Princeton, NJ

- Lead an investment theses with Brooks Hosfield, partner at SciFi VC, analyzing young consumer sentiment on Fintech companies and researching enabling technologies.
- Conducted due diligence (Senior Investment Analyst), using market analysis (TAM/SAM/SOM, CAGR), analyzed data on customer retention, and more, to grant funding up to $10K for 10+ Princeton-founded startups.
