

Sol Park

(425) 326-2651 | solpark@princeton.edu | <https://sol-park.vercel.app/>

Education

Princeton University

B.S.E., Computer Science; Minors: Quant. Econ., Comp. Bio., Philosophy

Sep 2024 – May 2028

Princeton, NJ

Relevant Coursework: Programming Systems, Machine Learning, Data Structures and Algorithms, Probability and Stochastic Systems, Microeconomic Theory, Macroeconomic Theory, Real Analysis, [Graduate] Statistical Genomics

Technical Skills

Programming Languages: Python, Java, TypeScript, JavaScript, C++, C, SQL, HTML/CSS, Solidity, R, C#

Tools / Frameworks / Libraries: React Native, Git, PyTorch, PostgreSQL (Supabase), AWS Cloud, Numpy

Soft Skills: Leadership, Communication, Data Analysis, Creativity, Problem Solving, Testing, Collaboration

Languages: English, Korean (native/fluent), Chinese (elementary)

Experience

ML Platform Engineering Intern

July 2026 – Present

Remitly

Seattle, WA

- Designing a causal inference pipeline in Python/SQL (causal forests / propensity-based estimation) to isolate the effect of individual churn drivers across all customers.
- Implementing a Pareto/NBD "buy-till-you-die" model from scratch (MLE fit) to derive per-customer churn probability from transaction-frequency (NBD) and lifetime (Pareto) parameters, producing both the churn label that feeds the causal model and a per-customer ROI estimate.

Software Engineering Intern

May 2025 – August 2025

Nirvana Carbon Solutions (NCS)

West Bengal, India (Remote)

- Built a Python geospatial optimization tool that parses KML data from Google Earth and formulates water-source placement, fitting the maximum number of fixed-radius irrigation zones over available plot area to minimize water-transport distance across 10+ farms in West Bengal.
- Led a 5-engineer team to process 3,000+ hectares of coastal imagery for mangrove restoration, using R to convert geospatial files to shapefiles and locate deforested plots to the parishad (county) level for restoration prioritization.

Projects

The Initiative for CryptoCurrencies & Contracts

June 2026

Project: <https://safeconstruct-test.vercel.app/>

Princeton, NJ

- Deployed Solidity smart contracts to Base Sepolia (EVM) with Hardhat, wiring on-chain interactions through ethers.js and a relayer-wallet pattern that abstracts gas and eliminates private-key exposure for issuers.
- Built the smart contracts (Solidity, Hardhat, ethers.js) behind a blockchain safety-credential system, using a central "relayer" wallet to handle every on-chain transaction, so the organizations issuing credentials never have to manage crypto keys or pay transaction fees.

Fantasy Football Drafter

Jun 2026 – Present

Project: <https://fantasy-auction-drafter.streamlit.app/>

Seattle, WA

- Trained a scikit-learn HistGradientBoostingRegressor on historical NFL data to project player fantasy value, then built a Python valuation engine converting those projections into budget-normalized auction dollars via value-over-replacement (VOR).
- Developed a real-time Streamlit app that computes optimal max bids under a \$200 cap by adjusting each player's base value with live-inflation, positional-scarcity, and opponent-rivalry premiums, plus nomination strategy.

ThirdPlace

Mar 2026 – Present

Project: <https://github.com/sollymolly/ThirdPlace>

Princeton, NJ

- Building a React Native app with live UI, rendering a "fog-of-war" map that reveals explored regions from the user's traversed coordinates.
- Integrated the Google Places API with response normalization and coordinate-based (lat/long) queries for accurate real-time location tracking.

Leadership

Investor Relations Principal | Senior Investments Analyst

Sep 2024 – Present

Princeton Student Ventures (PSV)

Princeton, NJ

- Lead an investment theses with SciFi VC, analyzing young consumer sentiment on Fintech companies and researching enabling technologies; sourced, maintained, and continuing relationship with VC Partner.
- Conducted due diligence (Senior Investment Analyst), using market analysis (TAM/SAM/SOM, CAGR), analyzed data on customer retention, and more, to grant funding up to \$10K for Princeton-founded startups.
